Bailey Lightweight Steel Framing Details

**Bailey Wind Bearing Walls (BWB)**
Lightweight Steel Framing (LSF) provides economical structural support for finishes under lateral wind loads on buildings where other structural components carry axial loads. BWB walls can be designed for a variety of deflection limits for finishes such as EIFS, Stucco, Metal Panel, and Brick Veneer. Wind-Bearing LSF may be used in buildings of any height.

**Bailey Axial Loadbearing Walls (BAB)**
Lightweight Steel Framing (LSF) supports the combined axial and wind loads on interior and exterior walls. Buildings up to six stories in height can be framed using LSF. LSF works with a variety of floors including LSF Joists, ComSlab® composite flooring systems, OWSJ's, and hollow precast concrete.

**Bailey Joists for Floors & Roofs**
Lightweight Steel Framing (LSF) Joists offer a wide range of span and load capabilities for commercial and residential floor systems and mezzanines. LSF ceiling Joist members can also be utilized for pitched, mansard, and flat roofs. The use of Bailey LSF Joist members will provide support for interior drywall ceilings where long clear spans are required.

**Bailey Non-Loadbearing Walls (BNLB)**
Lightweight Steel Framing (LSF) provides an effective solution for interior non-load bearing walls and partitions. When combined with top track deflection members, bulkheads will resist buckling caused by deflection of floor and roof assemblies. Non-load bearing LSF provides a stable framework for drywall or other finished wall surface applications.

**Bailey Spandrel Walls**
Lightweight Steel Framing (LSF) accommodates a variety of spans for continuous strip window applications. LSF provides a stable, square platform in which glazing units and frames can be effectively installed.
Bailey Lightweight Steel Framing Details

General Details

1 – Bailey Stud to Bailey Track

2 – Bailey Stud to Bailey Patented Punched Track

3 – Bailey Stud Reinforced with Bailey Track

4 – Bailey Stud with Web Stiffener Reinforcing

5 – Jamb Stud at Door Opening

6 – Bailey Stud to Bailey Track at Corners
Bailey Lightweight Steel Framing Details

7 – Through-the-Stud Bridging

8 – Flat Strap Bridging

9 – Notched Channel Bridging

10 – Exterior Sheathing

11 – Exterior Rigid Insulation

12 – Exterior Sheathing and Rigid Insulation
Bailey Lightweight Steel Framing Details

13 – Continuous Wind Bearing Stud at Parapet

14 – Wind Bearing Infill Wall

15 – Spandrel Wall for Strip Windows
Bailey Lightweight Steel Framing Details

16 – Single Deflection Track

17 – Horizontal Flange Attachment (HFA) Clip

18 – Deflection Track

19 – Slotted Deflection Clip
   (Radius Wall Applications)

20 – Bailey Multi-Slot Track
Bailey Lightweight Steel Framing Details  Wind Bearing Walls – Details at Openings

21 – Head Track to Jamb Studs

22 – Sill Track to Jamb Studs

23 – Reinforced Head Track to Jamb Stud

24 – Reinforced Sill Track to Jamb Stud
